

Today's new AC equipment provides increased reliability, quieter operation and use of non-CFC based refrigerants. Furthermore, it could reduce your cooling energy costs by 20% or more!

HIGH-EFFICIENCY **cooling** EQUIPMENT REBATE PROGRAM

Want a partnership that pays?

Cooling can be a significant part of your business' energy bill, particularly if you have old or inefficient equipment. That's why you should consider installing a new high-efficiency cooling system - to reduce the amount of energy consumed and still meet your cooling needs.

As your local utility, we offer rebates for energy-efficient cooling systems that lower electricity and maintenance costs. With paybacks as little as three years, you can enjoy lower energy bills and have more money to invest elsewhere in your business.

Do you qualify?

All business customers we serve are eligible for rebates. Applicant must be the end-user of the cooling equipment. Eligible equipment must:

- Meet or exceed minimum efficiencies on the application
- Have the same nominal capacity as your existing system (if you are replacing one)
- Be ARI-rated (www.ariprimer.net.org)
- Be a packaged terminal air conditioner, rooftop unit, split system, chiller or geothermal (water source) heat pump

Cooling equipment, such as condensers, not covered under the Cooling Equipment Rebate Program may be eligible for rebates through our Custom Rebate Program.

How do you participate?

Just follow these easy steps:

1. Complete the Cooling Equipment Rebate Application.
2. Submit your completed application for approval before ordering the high-efficiency cooling equipment.
3. Contact us to inspect your old equipment prior to installation of the new equipment.
4. After your new cooling equipment is installed, submit the invoices. We will issue your rebate check upon post-inspection.

Rebate funds may be limited, so please contact us to confirm availability. Maximum cooling rebate amounts are determined based on customer usage per address, per year. **Specific terms and conditions can be found on the back of the Cooling Equipment Rebate Application.**
