

Pilot Lights

Many older gas appliances have a small, continuously burning gas flame-the pilot light-that ignites the main burner. Newer models have electric igniters.

- Know which, if any, of your appliances have a pilot light.
- Keep the manufacturer's relighting instructions within easy reach.

OPU will relight your pilot lights at no charge as a service to our customers. Call 507-451-1616 to schedule a service professional to complete this work.
